

Fourth European Congress of Neurosurgery

Prague, June 28 - July 2, 1971

PROGRAMME

SCIENTIFIC PROGRAMME

MAIN TOPIC:

PRESENT LIMITS OF NEUROSURGERY

A ONCOLOGY

- A 1 Genetic Aspects of Brain Tumors
- A 2 Experimental, Biochemical and Immunological Aspects
- A 3 Non-surgical Therapy of Brain Tumors
- A 4 Limits of Surgical Therapy of Brain Tumors

B VASCULAR NEUROSURGERY

- B 1 Cerebral and Spinal Circulation
- B 2 Vasospasm in Vascular Neurosurgery
- B 3 Operability Limits of Saccular Aneurysms
- B 4 Operability Limits of Intracranial Arteriovenous Malformations
- B 5 Spontaneous Intracerebral Haemorrhage
- B 6 Vascular Microneurosurgery
- B 7 New Techniques in Vascular Neurosurgery

C FUNCTIONAL NEUROSURGERY

- C 1 Epilepsy
- C 2 Psychosurgery
- C 3 Pain, Spasticity

D DEATH OF THE BRAIN

E POSTTRAUMATIC AND DEGENERATIVE SPINAL DISORDERS

FREE COMMUNICATIONS

- FC 1 General Problems of Neurosurgery
- FC 2 Traumatology
- FC 3 Miscellaneous

FILMS

SCIENTIFIC PROGRAMME

will be held in Rudolfinum and the Faculty of Arts in three simultaneous sessions.

SIMULTANEOUS TRANSLATION

in English, French, German, Russian, Spanish and Czech will be in the Lecture Hall A only.

TIMING OF PAPERS AND DISCUSSIONS

The time of presentation is 10 minutes, in leading papers 15–20 minutes. Discussion, limited to 3 minutes, will be organized at the end of each topic and directed by chairmen. Papers "read by title" will appear in the Book of Abstracts in author's summary.

BLOOD DERIVATIVES „SEVAC“

Human FIBRINOGEN SEVAC

(freeze-dried) for i.v. application, for therapy or prevention of haemorrhage in all cases where the fibrinogen level in plasma falls below 100 mg $\%$.

FIBRIN FILM SEVAC

is suitable as a protective membrane since it protects the defective area inside or outside the body against influence of external environment. Implanted into the organism, it does not provoke any local reactions, its absorption ensues on an average 3 weeks later.

FIBRIN FOAM SEVAC

the preparation perfectly imitates natural fibrinous reticular tissue which is the basis of the coagulum. Fibrin foam readily adheres to a bleeding surface, its haemostatic effect being instantaneous.

THROMBIN human SEVAC

for local and superficial application is used for haemostasis in deep wounds in combination with fibrin foam.

PLASMIN SEVAC

for surface application is a freeze-dried proteinic enzymatic preparation which consists predominantly of plasmin. Contains neither an antiseptic nor a stabilizer. One original packing contains 5000 Units of plasmin.
