**VIA ELECTRONIC TRANSMISSION**

The Honorable Charles E. Grassley  
Chair  
Committee on the Judiciary  
U.S. Senate  
Washington, D.C. 20510

The Honorable Dick Durbin  
Ranking Member  
Committee on the Judiciary  
U.S. Senate  
Washington, D.C. 20510

Dear Chairman Grassley and Ranking Member Durbin:

On behalf of the undersigned organizations, we commend your bipartisan leadership in addressing the fentanyl epidemic, a crisis that has devastated families across the country, and for holding the hearing entitled, *The Poisoning of America: Fentanyl, its Analogues, and the Need for Permanent Class Scheduling*, scheduled for Tuesday, February 4, 2025.<sup>1</sup> As physicians, we write to provide a clinical perspective on this issue, particularly regarding our compliance with the Controlled Substances Act (CSA) and the critical distinction between fentanyl approved by the U.S. Food and Drug Administration (FDA) and illicit fentanyl analogues.<sup>2</sup>

We care for patients who experience severe, chronic intractable pain due to conditions such as advanced cancer, complex surgical interventions, and neurological disorders who require carefully prescribed individualized pain management strategies. This often involves the use of regulated medical devices and controlled substances under the CSA. For example, patients with cancer pain caused by tumors that have spread to the skeleton or that are compressing nerves, or individuals suffering from severe spasticity disorders (i.e., cerebral palsy, multiple sclerosis, stroke, brain/spinal cord injury), may require an intrathecal drug delivery system.<sup>3</sup> Sometimes colloquially termed “pain pumps,” these implantable devices deliver medication directly into the spinal fluid, providing effective pain relief while minimizing systemic opioid exposure. These therapies allow patients to have significant improvement in symptoms and quality of life as compared to oral medications. Some of the FDA-approved pain medications used in these devices—such as morphine—are classified as Schedule II drugs due to their high potential for abuse. Yet, they are essential for certain chronic disabling medical conditions and safe when prescribed and carefully monitored by a physician.

As you know, the U.S. Drug Enforcement Administration (DEA) oversees a rigorous regulatory framework for controlled substances to prevent misuse and diversion while ensuring appropriate medical access. Physicians and other clinicians must register with the DEA to prescribe, administer, or dispense controlled substances, including FDA-approved fentanyl and other opioids. This registration must be renewed every three years, and registrants must comply with strict record-keeping, safety reporting, prescription monitoring, and storage requirements. The most restrictive classification is Schedule I. The

<sup>2</sup> 21 U.S.C. §§ 801-971 (1970).

<sup>3</sup> These are prescribed when oral opioids or other pain management strategies are ineffective or cause intolerable side effects.

CSA defines a Schedule I controlled substance as a drug or other substance that has a high potential for abuse, has no currently accepted medical use in treatment in the U.S., and lacks accepted safety for use under medical supervision.<sup>4</sup>

Illicit fentanyl analogues are far more potent and deadly than prescription opioids. Until federal authorities and Congress stepped in seven years ago to temporarily add them to Schedule I, these substances lived outside of this carefully constructed and regulated ecosystem.<sup>5, 6</sup> As federal agencies continued to report on the status of the fentanyl and opioid crisis annually, Congress extended the temporary scheduling several times, and it is currently set to expire on March 31, 2025.

Given the above, maintaining illicit analogues under a temporary Schedule classification is not a sustainable or rational approach. Continually revisiting its classification creates confusion about the dangers of these substances and hampers efforts to address the crisis comprehensively. Illicit fentanyl analogues have an extraordinarily high potential for abuse, have no accepted medical use, and cannot be used safely under any circumstance—even with medical supervision. In addition, illicit fentanyl analogues have become widely accessible on the streets and through online sources. This accessibility (and affordability) has caused chaos for patients as many pursued illicit fentanyl analogues, looking for pain relief and believing them to be equivalent to fentanyl but not understanding the dangers of these compounds, which do not carry the imprimatur of FDA approval and are not used under the careful monitoring by their physician.<sup>7, 8</sup> Finally, the uncertainty surrounding the continued temporary scheduling undermines the continuity of the DEA's ability to fulfill its core mission of regulating access to controlled substances to prevent misuse, diversion, and illicit distribution of controlled substances. To this end, we commend recent bipartisan efforts to advance legislation that addresses the fentanyl crisis by categorizing illicit fentanyl and its analogues in the clinically appropriate schedule while preserving access to scientific research into methods of pain management and medication-assisted treatment.<sup>9</sup>

As you consider permanent scheduling and other changes to the CSA, we urge you to protect the role of FDA-approved fentanyl and other opioids in clinical medicine. Specifically, we request that you make a technical correction in the SUPPORT for Patients and Communities Act to maintain the long-standing practice of the DEA registrants obtaining opioid and other compounded intrathecal medications to fill patients' pain pumps. These pumps require periodic refilling of the medication reservoir to maintain therapy. The medications are often prepared by outside pharmacies pursuant to a physician's prescription. For many years, these syringes of sterile medications would be delivered to the physician's office, where the refill would be completed. For those patients who are too disabled to make the journey to the physician's office, some of the compounding pharmacies employ nurses who are trained in these refill techniques and would take the medications to the patient's home and perform the refill there.

Unfortunately, a misinterpretation of Section 3204 of the SUPPORT Act threatens this critical treatment option by preventing pharmacies, including compounding pharmacies, from dispensing controlled substances for use in pain pumps. Federal law restricts pharmacies from dispensing controlled

<sup>9</sup> Senate Judiciary Committee (2025, January 30), Grassley, Cassidy, and Heinrich propose a permanent scheduling fix for fentanyl-related substances. United States Senate, <https://www.judiciary.senate.gov/press/rep/releases/grassley-cassidy-heinrich-propose-permanent-scheduling-fix-for-fentanyl-related-substances>.

medications to anyone except the end user. An exception to this prohibition was created by the SUPPORT Act to allow direct dispensing to the practitioner, but only for medications used to treat opioid use disorder.<sup>10</sup> This restriction has created significant logistical barriers, forcing patients and providers to navigate burdensome workarounds such as requiring homebound patients to execute a power of attorney agreement or personally receive and store highly concentrated, perishable opioids—both of which pose risks to patient safety and medication security.

The DEA and the U.S. Department of Justice both recognize this issue but have stated in conversations with physicians and compounding pharmacies that the only solution is a legislative fix. Moreover, the DEA has in the past stated that they would at least consider issuing temporary guidance stating that they do not believe the wording prohibits dispensing controlled substances used in intrathecal pain therapy to physicians. However, this document has yet to be released, thereby sowing confusion for practitioners serving this vulnerable population.

Because this issue cannot be resolved administratively, a legislative fix is necessary to restore access to intrathecal pain pumps without unnecessary regulatory burdens. This targeted correction would protect patient access to evidence-based pain management, maintain proper DEA oversight of controlled substances, and prevent undue administrative challenges for both physicians and patients. Ideally, this fix would include changes to the code allowing the dispensing of these medication syringes to the prescribing physician or their designate (such as the refilling agency). Moreover, we recommend amending the referenced statute to add Schedule II medications to the list of approved schedules for these deliveries.<sup>11</sup>

We appreciate your leadership in addressing this crisis and urge Congress to enact policies that effectively combat the illicit fentanyl epidemic while preserving access to legitimate, physician-directed pain management. We look forward to collaborating with you on statutory measures that balance public health and law enforcement priorities, improve patient care, and promote responsible prescribing practices in the fight against fentanyl-related deaths.
